

TIER 4 · US\$1,500–3,000 · PRODUCTISED SERVICE

AP Transformation Blueprint

You provide a structured file. We return a written operating design. Still AP only.

Evidence Room — Custom Blueprint

00 — Service brochure

Product: Evidence Room Custom Blueprint

Brand idea: Proof before permission. Agents earn responsibility. Evidence decides.

Service type: Productised advisory deliverable — **not** software implementation, **not** a managed AP service

Indicative price: US\$1,500–3,000 (fixed band; see scoping)

ERP stance: Agnostic

Examples: ACME Manufacturing — **ILLUSTRATIVE** only

Version: 1.0

This brochure is for a buyer who already has (or will buy) Professional and/or Team materials and wants a **buyer-specific** first-increment blueprint. It does not promise savings, ROI, fraud reduction, compliance certification, or autonomous payments.

1. What you buy

A written **Custom Blueprint** for **one** AP agent increment on **one** named slice of *your* operation:

- First-slice allow-list
- As-done notes from your intake answers (and optional 60-minute call)
- Charter skeleton at **L0** for one agent
- Control / human-class confirmation
- Test and shadow outline with **your** strata (counts left for you to fill)
- 90-day evidence plan with caveats
- Business-case input sheet populated with **your** figures or explicit ASSUMED flags

You do **not** buy: ERP configuration, model hosting, labelled historical scoring done for you, a Steer committee, or permission to execute.

How. Intake (01) → fulfilment (02) → deliverable (03) → you execute the 90-day plan (04) with Professional OS.

Who.

Side	Role
Buyer Accountable	Head of AP / Controller (must be named)
Buyer coordinator	Transformation or AP Manager
Evidence Room fulfilment	Named practitioner (not an agent)
Agent	Not a party

Wrong. Treating the PDF as a go-live certificate. Asking us to grant L3 on paper.

Control. Scope lock in the intake. Anything outside the band is a **new** engagement.

Measure. Deliverable completeness vs outline; buyer sign-off of receipt (not of agent quality).

Evidence. The Blueprint file set plus intake ID. Buyer stores it under their Evidence Room path.

2. Why the price band is narrow

Band	When it applies	What is in
US\$1,500	One entity, one channel, one type; questionnaire complete; no call; no extra agents	Written blueprint from intake only
US\$2,250	Typical: 60-minute call + questionnaire + one revision	As 1,500 + call notes + one redline cycle
US\$3,000	Two related entities or two channels or a second charter <i>skeleton</i> (still one increment to run first) + call + one revision	Stated on the order; still no execution

Above this band: Team workshop facilitation or multi-increment programme design — **not** this SKU.

Price is a **service fee**, not a share of savings. No success fee. No guaranteed payback.

3. What / how / who / wrong / control / measure / evidence (service-level)

What. A buyer-specific plan to start AP Agent OS without inventing a 16-agent transformation.

How. Structured intake; map to Professional artefacts; write the outline in 03 ; stop.

Who. Human practitioner. The buyer remains Accountable for AP.

Wrong. We “approve” their production agent. We copy another client’s workflow (we will not; ACME is fictional).

Control. Fulfilment checklist; no L2+ recommendation without their existing Measure pack (almost never present at this SKU).

Measure. Cycle time of fulfilment (target **ILLUSTRATIVE** 5–10 working days after a complete intake). Quality = outline sections present, not “they went live.”

Evidence. Intake hash/version; deliverable version; revision log.

4. Fit / do-not-buy

Fit. You can name an AP Accountable. You can describe channels. You will not require us to access your ERP. You accept L0 as the start.

Do not buy if. You want us to release payments, pick a model vendor as a certified stack, produce a board ROI, or implement in your tenant.

Privacy: do **not** send live IBANs, full invoice PDFs with personal data, or employee files in the intake. Use counts, redacted examples, or fictionalised samples.

5. Relationship to other products

Product	Role
Professional OS	Rulebook the Blueprint cites
Team Edition	How your people run workshops/training — optional, separate
Custom Blueprint	Your first increment, written down
Software / vendors	Your choice; we remain ERP-agnostic

6. ACME Manufacturing — ILLUSTRATIVE outcome

Fictional ACME paid the mid band. Deliverable: ACME US · email PDF · Intake + Duplicate @ L0 · 90-day to Shadow · Conservative case incomplete (no CPI) flagged ASSUMED. They did not receive a live agent.

7. Commercial language (allowed)

- Fixed fee in band
- One increment
- Written deliverable
- Buyer owns their data and decisions

Not allowed in quotes: guaranteed ROI, fraud coverage, compliance stamp, autonomous AP, “implementation included.”

Proof before permission.

Evidence Room — Custom Blueprint

03 — Deliverable outline

Product: Evidence Room Custom Blueprint

Version: 1.0

This is the **table of contents and section standard** for every Custom Blueprint delivered to a buyer. Fulfilment populates it. Square brackets are buyer-specific. The file the buyer receives should be titled `BLUEPRINT_[buyer]_[slice]_[date].md` (or PDF) and stored in **their** Evidence Room.

Every populated section must still answer **what / how / who / wrong / control / measure / evidence** where work is specified.

Cover

- Product: Evidence Room Custom Blueprint
- Buyer: `[organisation]`
- Intake ID:
- Band: US\$ `[1500/2250/3000]`
- Accountable:
- Practitioner:
- Date / version:
- Classification: Advisory deliverable. **Not** an implementation certificate, audit opinion, or permission to execute.
- Brand: Proof before permission. Agents earn responsibility. Evidence decides.

1. Decision summary (one page)

Item	Content
First slice (allow-list)	entity / channel / type / segment / cap
First agent(s)	number + name; autonomy L0
Verbs this period	none (observe / recommend-to-evidence only)
Forbidden	payment release; vendor bank write; policy exception grant; legal chase; [add]
Why this increment	operational sentence from intake facts
Why not wider	
	e.g. Shadow exit recommendation — not “live AP AI”

Item	Content
90-day end-state (honest)	
Critical caveat	e.g. identity lead time; tolerance POLICY GAP
Economics	Conservative not shown / ASSUMED / sheet attached
Decision for buyer	Proceed to Observe / Hold pending [x] / Stop

2. What we understood (facts vs assumptions)

Table: fact / assumption / unknown, with intake field IDs.
Call notes if any, split the same way.
Do not polish unofficial rules out of existence.

3. As-done implications

- Channels and side-files named
- Money-adjacent map (who releases, who changes banks)
- SOP fiction to verify in Observe (Professional Step 1)
- Exception nicknames to map to 03_EXCEPTION_TAXONOMY.md

4. Slice charter

Full allow-list. Isolation note (technical Y/N/unknown).
Out-of-scope list.
Link: Professional START HERE 01–12.

5. Agent charter skeleton

Populate ../03_AP_AGENT_OS_PRO/Templates/AGENT_CHARTER.md Part B for the chosen agent.
L0–L4 table with **no** silent execute.
Forbidden tools.
90-day subset.
Instruction labelled **Starting operating instruction — adapt. Not a magic prompt.**
If \$3,000 second skeleton: same, clearly marked **do not run in parallel as a second increment.**

6. RACI (minimum)

Translation table for standard roles → buyer titles (from intake).

Rows: charter accept, test go/no-go, shadow, kill-switch, payment release (human).

Agent never A.

7. Controls and risks

Human-class table for this slice.

Top 8 risks from the Professional catalogue with buyer-specific notes (not generic “AI”).

Pilot blockers flagged.

Pointer to `Templates/RISK_ASSESSMENT.md` for them to complete scores.

8. Testing outline

- Historical strata list (codes; **n left blank** for buyer)
 - Must-include: EX-PAY-001 if intake in scope; paid sample if Duplicate in scope; out-of-scope/not-an-invoice
 - Labels-first rule
 - UAT human-class scenarios
 - Shadow duration: one AP cycle **ILLUSTRATIVE**
 - Pilot: **not** in 90-day default unless they already have evidence (rare)
-

9. Measurement and money

- Dictionary IDs to freeze (no blog targets)
 - CPI: exist / build / skip
 - Business-case inputs copied with ASSUMED flags
 - Three-scenario rule; Conservative first
 - Research: omit unless the buyer asked; if used, label Deloitte 8 Oct 2025 (63% / 21%) and Hackett Nov 2025 software-adopter figures as **not Evidence Room results**
-

10. Environment and change

- Identity pattern `agt.[charter].test/.shadow`
 - Phase 5 tasks and **their** lead-time estimate
 - Hash/pin reminder
 - Approved-tool constraint from intake
-

11. 90-day plan

Populate 04_90_DAY_PLAN_TEMPLATE.md .

State whether the 4–6 week well-bounded calendar **fails** (usual).

12. Training and comms (pointers)

- Train processors before Shadow (Team/Training/01)
 - C3 message on Shadow start
 - Language list
-

13. What this Blueprint does not do

- Grant autonomy
 - Implement software
 - Certify controls, tax, or security
 - Promise savings or cycle-time cuts
 - Replace Observe on the floor
-

14. Receipt (buyer)

I have received this Blueprint. I understand execution rights are earned later through my Test/Shadow evidence. I will not represent this document as a go-live approval.

Accountable: _ Date: _

Fulfilment completeness (practitioner)

All sections 1–14 present ☐

Second read passed ☐

PII minimised ☐

Proof before permission.
