AP Agent Starter Kit

Enough operating model to start Monday: ten agent blueprints, taxonomy, human-vs-agent rules, charter path, and a governance checklist.

Start here — Friday to Monday

1. Read the responsibility model. Default is Observe.
2. Run the diagnostic with unknown answers left blank.
3. Map one real process (invoice with PO, three-way) using the one-page map.
4. Pick one first agent — usually A03, A05 or A10 — where data already exists.
5. Write the charter. Fill exclusions first.
6. Stand up three KPIs from different families.
7. Test on historical cases before anyone calls it a pilot.

Operating model

AP remains the function. Agents are workers with job descriptions. The ERP and any AP platform remain systems of record. Evidence Room is the system of design, control and proof.

Layer	Holds	Does not hold
Human	Accountability, payment authority, promotions, supplier relationships	Every keystroke
Agent OS (this kit)	Charters, taxonomy, levels, KPIs, tests	Money movement
AP platform / IDP / RPA	Capture, workflow, matching engines you already own	Governance of LLM agents
ERP	Books, stock, vendors, payments	Exception judgement

Top 10 agent blueprints (summary)

ID	Agent	First job this month
A01	Invoice Intake Agent	Decide whether an inbound invoice is complete, correctly extracted and fit for downstream validation.
A02	Invoice Validation Agent	Test whether supplier, invoice number, date, PO, legal entity, currency, amount, tax and lines are valid and unique enough to proceed.
A03	Matching Agent	Perform PO, price, quantity and receipt matching, including tolerances and multi-line invoices.
A04	Exception Triage Agent	Classify every AP exception into the Evidence Room taxonomy and recommend the next human or agent action.
A05	Goods Receipt Agent	Find missing or partial receipts, identify the likely receiver or PO owner, and prepare a follow-up pack.
A06	PO Quality Agent	Detect poor PO practices that create downstream AP exceptions — wrong price, thin quantity, expired PO, bad coding, wrong vendor, blanket-PO abuse.
A07	Approval Agent	Watch the approval graph for stalls, absence, broken delegation, DoA breaches and payment-deadline risk.
A08	Supplier Resolution Agent	Draft supplier communication for missing PO, duplicates, incorrect invoices, missing information, credit notes and statement differences.
A09	Internal Follow-Up Agent	Draft and manage internal follow-ups for missing GR, incorrect PO, approvals, coding, requester clarification and business-owner action.

ID	Agent	First job this month
A10	Duplicate & Anomaly Agent	Surface exact duplicates, near-duplicates, repeated amounts, invoice-number variation, supplier anomalies and unusual payment characteristics as indicators — never as a fraud verdict.

Full sixteen-agent charters are in Professional.

Human vs agent vs deterministic

Work	Prefer
Match math, duplicate exact key, DoA limit, status update	Deterministic service
Classify messy exceptions, draft comms, explain a variance, prioritise	Agent (Recommend/Prepare)
Pay, change bank data, create vendor, accept a DoA exception, post close journals	Human
Widen a tolerance, promote an agent, close a critical incident	Human owner

Governance checklist (Starter)

- Named owner per agent.
- No shared service accounts.
- Invoice text is untrusted input.
- Payment release is a human control.
- Bank-detail changes are out-of-band and dual-controlled.
- Logs: who, what, when, version, override.
- A written fallback if the model is down: the old SOP.

90-day sketch (illustrative)

Weeks 1–2 observe and measure. Weeks 3–4 charter and historical test. Weeks 5–8 shadow. Weeks 9–12 bounded Level 2 on one population. Actual duration depends on systems, data, controls and governance. A well-bounded agent *can* move in 4–6 weeks; many will not.

WHY THIS IS NOT A PROMPT PACK

A prompt pack gives you words to paste. This kit gives you a job, a prohibition, a control, a measure and a promotion rule. If a page answers none of those, we deleted it.
