

DIGITAL PRODUCT

AP Transformation Blueprint

A productised assessment. Structured intake in. Architecture, controls, case and 90-day plan out. No software to install.

What the Blueprint is

A productised service. You complete a structured intake. Evidence Room returns a fixed pack. It is not a software implementation and not an audit opinion.

Intake (customer)

- Diagnostic answers (35 questions) and 90-day volume file (counts, not images).
- Exception sample (redacted) of 25–40 items with what happened.
- Current RACI, DoA description, payment SoD, bank-change procedure.
- System landscape (ERP, AP platform, IDP, workflow) — names only, no credentials.
- Constraints: freeze windows, works council, data residency.
- Ambition: which failure mode must move in 90 days.

Fulfilment (Evidence Room)

1. AI-assisted structuring of intake against the taxonomy and agent library.
2. Human AP specialist review (mandatory). No pack ships on model output alone.
3. Pack: current-state, maturity score, opportunity map, recommended architecture (usually 3–5 agents, not 16), operating model, KPI baseline, controls, business-case ranges, roadmap, 90-day plan, executive slides.
4. One clarification call (60 minutes). One revision.
5. Elapsed: target 10 business days after a complete intake.

Price posture

USD 1,500–3,000 depending on entity count and whether a live workshop is included. Not a substitute for a systems integrator.
