

AP Agent OS — Professional

The full file-based operating system for one named practitioner. Sixteen agent specifications, process-mapping method, exception taxonomy, governance framework, control matrix, KPI definitions, testing and shadow method, and a business-case workbook whose outputs are arithmetic on your inputs.

Hard holds

- ERP is the system of record for accounting.
- Named humans are the system of record for cash.
- Default autonomy is L0 or L1. Responsibility is earned.
- No guaranteed savings, ROI, fraud detection, or compliance.

Commercial test: would a Finance Director responsible for 15,000 invoices a month pay \$199 of their own money for this because it saves days of unstructured research and leaves a framework they can defend?
