

Proof before permission.

The operating system for building, governing, and scaling AI agents across Accounts Payable. A licensed digital method and toolkit. It does not replace the AP stack. Payment authorisation remains human.

What a purchaser receives

- Free diagnostic — 36 questions, six dimensions, veto rules.
- Starter — \$79 — operating model and ten blueprints.
- Professional — \$199 — sixteen-agent OS, governance, KPI, testing, business case.
- Team — \$499 — workshop and enterprise facilitation.
- Custom Blueprint — \$1,500–\$3,000 — productised assessment.

What this is not

Not a ChatGPT prompt pack. Not an ERP. Not a payment institution. Not a fraud-detection guarantee. Not a compliance certificate. Not a promise of savings or ROI.

Permission ladder

L0 Observe · L1 Recommend · L2 Prepare · L3 Execute within guardrails · L4 Managed autonomy. Default L0/L1. Responsibility is earned.

Hard hold. ERP is the system of record for accounting. Named humans are the system of record for cash. Vendor bank changes and close attestation stay human.

Evidence

Customer-facing statistics are limited to the research ledger. McKinsey State of AI 2025 (n=1,993): 88% regular AI use; nearly two-thirds not scaling; 62% experimenting with agents; 23% scaling an agentic system somewhere. Ardent cost-per-invoice figures appear only as vendor-citing-independent citations and are not used as targets.
