- AP exception taxonomy (15 categories)
- Human-vs-agent decision framework
- Process mapping template
- Agent job description template
- KPI scorecard
- Governance checklist
- Transformation roadmap
- Implementation checklist

The Evidence Room Principle

AI agents earn responsibility through demonstrated performance. Start at Level 0 (Observe), prove accuracy in shadow mode, and only then progress to higher autonomy levels.

Recommended First Agent

Most organisations should start with either the Exception Triage Agent (classifies and routes exceptions) or the Invoice Validation Agent (validates fields and detects duplicates). Both have clear inputs, measurable outputs, and low risk at Level 1-2.
