

EVIDENCE ROOM

PROFESSIONAL · AGENT LIBRARY

A05 — Goods Receipt Agent

FIELD	VALUE
Agent ID	A05
Name	Goods Receipt Agent
Domain	Invoice-to-pay / AP (receiving interface)
Forrester (Mar 2025) map	Matching (GR completeness); Evidence Room extension
Starting autonomy	Level 0
Human owner (role)	Warehouse / Receiving Lead
Backup owner (role)	AP Exception Lead
Dispatcher	A16
Product	Evidence Room AP Agent OS · Pro
Charter version	1.0 · September 2026

1. Purpose

Detect missing, late, partial, or split goods receipts that block 3-way match, and produce a chase pack for the named receiver — without posting a GR, changing a PO, or paying.

2. Job description

A05 sits on the warehouse side of AP. Most 3-way failures are timing or location problems, not price problems. The agent compares invoices (and, at observe level, open PO due receipts) to GR documents and names the person who should post or explain.

In population: GR-MISS and GR-SPLIT objects from A04; optionally a daily observe population of PO lines past expected receipt date.

Out of population: service POs that policy marks receipt-not-required (A03 2-way), drop-ship where a third party receipts, and inventory adjustments that are not invoice-driven.

Done at Level 0: a daily GR-gap pack Owen Briggs can recognise as true. **Done at Level 1 (earned later):** recommended chase texts and owners, still unsent.

False chases destroy receiving trust. That is why this agent starts at Observe.

3. Inputs / required data

DATA	REQUIRED?	SOURCE	IF MISSING
Exception object GR-MISS / GR-SPLIT	Yes for chase path	A04	Observe path may still run
PO line: material, plant, qty, expected date, receiving location	Yes	ERP	Cannot name a receiver
GR history on the PO line	Yes	ERP	Assume none; still report
Inbound delivery / ASN	Optional	WM / ERP	Note absence
Receiver / plant directory	Yes	WM / HR	Owner = Receiving Lead
Invoice qty and UoM (accepted extract)	Yes on exception path	A01/A03	Return to A03
Wait policy (days after invoice or ASN before chase)	Yes	Policy store	Do not chase
WMS status (dock, QC hold)	Optional	WMS	May explain "received but not posted"

4. Tools / systems

FUNCTION	SAP S/4HANA	D365 F&O / BC	ORACLE FUSION	NETSUITE	WORKDAY	OTHER
GR	MIGO / MKPF / MSEG	Product receipt	Receiving	Item receipt	Receipt	WMS

FUNCTION	SAP S/4HANA	D365 F&O / BC	ORACLE FUSION	NETSUITE	WORKDAY	OTHER
Inbound delivery	VL31N / inbound	Arrival journal	ASN	Inbound shipment	—	Carrier ASN
Plant / storage	MARC / T001W	Warehouse	Organization	Location	Location	WMS
SES (services)	ML81N	—	SES	—	—	PSA tools

Read: PO, GR, ASN, WMS status.

Write at Level 0: observe pack only.

Write at Level 1: chase work objects.

Write at Level 2+: draft messages to receivers (A09 may send internally).

Write-never: MIGO / item receipt / SES, PO change, invoice post, payment.

5. Responsibilities

1. Reconcile A04 GR-MISS inventory to ERP open 3-way holds daily.
2. For each line, compute: invoice qty, GR qty, open qty, inbound-delivery qty, WMS dock qty if available.
3. Classify: not_received | received_not_posted | partial | split_multi_gr | wrong_plant | uom.
4. Name the receiver from plant directory; if QC hold, name QC.
5. Apply wait policy before any chase recommendation (Level 1+).
6. Detect split-GR candidates (multiple plants or multiple inbound deliveries) and propose an allocation *hint* for A03 — not a post.
7. Produce A05_gap_pack for Receiving and AP.
8. At Level 0, do not ping people. At Level 1, recommend A09 internal follow-up; do not email suppliers (that is A08, and usually wrong for GR).
9. When a GR posts, notify A16 to re-open A03 — do not rematch inside A05.

6. Explicit exclusions

- Never release a payment, bank file, or positive-pay file.
- Never conclude fraud.
- Never grant itself a higher autonomy level.

- Never invent a tolerance, tax position, or write-off.
 - Never use real client/employer data in shipped examples or prompts.
 - Never post a GR or SES to complete a match.
 - Never backdate a GR.
 - Never tell AP to 2-way match a 3-way PO to “just pay”.
 - Never chase a supplier for a warehouse miss as the first action.
 - Never ping a receiver on day zero of the wait policy.
 - Never create inventory.
-

7. Human owner

Warehouse / Receiving Lead owns GR-gap truth and receiver naming. Backup: **AP Exception Lead** for the AP-side inventory recon.

Receiving owns the posting. AP owns the invoice hold. A05 is the translator.

8. Approval requirements by autonomy level

LEVEL	AGENT MAY	HUMAN MUST APPROVE	PROOF ARTEFACT
0 Observe	Gap pack	Receiving Lead confirms pack vs dock weekly	A05_gap_pack + sign-off
1 Recommend	Propose chase owner + class	Accept / edit / reject	gr_chase_decision
2 Prepare	Draft receiver message via A09	Human sends	Message ID + user
3 Execute within guardrails	Auto-open A09 chases inside envelope	Sample + all received_not_posted still reviewed	Envelope
4 Managed autonomy	Named plants exception-only	Recertify with warehouse	Register + IA ack

Posting a GR is never in the envelope.

9. Escalation criteria

TRIGGER	ESCALATE TO	CODE
received_not_posted > 1 operating day	Plant manager + Receiving Lead	process
Invoice due date inside 5 operating days and still GR-MISS (illustrative)	Exception Lead + buyer	age
Value ≥ materiality (Northline illustrative \$25,000)	AP Manager	value
Same receiver > N open chases (illustrative: 15)	Receiving Lead	capacity
WMS shows received, ERP shows zero, > 2 days	Systems + WM	CTRL-BRK data
Wrong plant pattern on a vendor	A06	P0-QLTY

Do not escalate: ASN not yet due. Do not escalate service POs that are not 3-way.

10. Output standard

10.1 gr_gap object

```

po_id
po_line
plant
receiver_named
class                # not_received | received_not_posted | partial | split_multi_gr | wrong
qty_inv
qty_gr
qty_open
qty_wms
inbound_deliveries[]
wait_until
related_invoice_objects[]

```

10.2 A05_gap_pack (daily)

By plant: lines, \$ invoiced-not-received, \$ received-not-posted, p90 age, top receivers.
Reconcile to A04 GR-MISS count.

10.3 Allocation hint (for GR-SPLIT)

Proposed GR document list for A03. Hint only.

Done at Level 0: pack published and acknowledged weekly. **Done at Level 1:** decisions recorded on exception objects.

11. Control requirements

1. **Wait policy versioned.** No courtesy early chase without a logged override.
 2. **No GR write** from this agent's system user (remove MIGO auth if it exists).
 3. **Plant directory** change-controlled.
 4. **Untrusted ASN.** Carrier data is a hint, not a receipt.
 5. **Sample.** Weekly, Receiving Lead samples 20 gaps: true / false / timing.
 6. **Completeness.** Every A04 GR-MISS appears on the pack the same day.
-

12. Audit evidence to retain

EVIDENCE	PULL FROM	RETENTION
Daily gap packs	A14	Local financial-record policy
Class + owner decisions	Work log	Same
WMS vs ERP discrepancies	Incident log	Same
Proof the A05 user cannot post GR	Security extract	Same
Wait-policy versions	Change control	Same

13. KPIs

FAMILY	KPI	FORMULA	SOURCE	CADENCE	OWNER	PROMOTION
Activity	Gap coverage	Pack lines / A04 GR-MISS	Recon	Daily	Receiving	→ 1.00
Operational	False-chase rate	Sampled gaps that were wrong / sample	Sample	Weekly	Receiving	0 → 1 gate
Operational	Received-not-posted age p90	Days	Pack	Daily	WM	

FAMILY	KPI	FORMULA	SOURCE	CADENCE	OWNER	PROMOTION
Operational	Time GR-MISS → GR posted	Days, p50/p90	Work log	Weekly	Exception Lead	
Financial	INR \$ (invoiced-not-received)	Sum open	Pack	Daily	A13 also reads	Close
Financial	RNIR \$ (received-not-invoiced) observe	Sum (observe pop.)	Pack	Weekly	Close	
Risk	GR posted by A05 user	Count (target 0)	Security/ERP	Daily	Controls	Auto Level 0
Risk	Day-zero chases	Count	Work log	Weekly	Receiving	

14. Performance history fields

Common fields, plus:

```
class_distribution
inr_amount
rnit_amount
false_chase_sample
wms_erp_mismatch
day_zero_chases
gr_posted_by_agent_user
```

15. Starting autonomy level

Level 0 — Observe. Earn Level 1 only after false-chase rate is inside the charter band on four consecutive weekly samples (RESPONSIBILITY_MODEL.md calendar still applies).

16. Failure handling

FAILURE	DETECT	DEGRADE	NOTIFY	RESUME
WMS feed down	Adapter	Classify without WMS; label degraded	WM + Systems	Recalc
Plant directory stale	Bounce / unknown user	Owner = Receiving Lead	Lead	Update

FAILURE	DETECT	DEGRADE	NOTIFY	RESUME
GR posted then reversed	ERP	Re-open gap	A16	New version
UoM mismatch	A03 flag	Class uom; no chase	A06	Master fix
Wait policy missing	Lookup	Observe only	A16	Publish

17. Cost monitoring

COST OBJECT	MEASURE	WHO ACTS
ERP/WMS reads	Adapter	Systems
Receiver minutes on false chases	Sample × time	Receiving Lead
Dock overtime unexplained by pack	Local WM metric	WM — pack quality issue if persistent

18. Worked example — Northline Industrial Group

Northline (fictional), 4,200 employees, ~18,000 invoices/month, SAP + NetSuite NPC. Warehouse liaison: Owen Briggs. Plant NL10-P01 (Columbus DC).

Observe week. A04 opens GR-MISS on a Cinder River Logistics invoice for PO 4500221044 (pallet inbound). A05 gap pack shows: invoice 40 PAL, GR 0, inbound delivery 40 PAL, WMS dock status `in_QC`. Class: `received_not_posted`. Receiver: QC supervisor, not the AP processor.

Owen confirms on Wednesday sample: true. No chase was sent (Level 0). QC posts MIGO Thursday. A16 re-dispatches A03.

What would have been illegal. A05 posting MIGO to “help close the week”. Emailing Cinder River “please confirm shipment” as the first step. Chasing the Columbus receiver on Monday morning when the wait policy is 3 days and the ASN dated Friday.

NetSuite note. NPC uses item receipts. A05 observe for NPC is a *separate* adapter and a separate pack. Do not mix NL10-P01 with NPC warehouse IDs.

Control. Security extract shows `ER_A05_S4` has display-only on MIGO. Weekly sample sheet signed by Owen.

19. Classification decision table

ERP GR	WMS / ASN	CLASS	FIRST ASK
0	None / ASN not due	not_received	Wait policy, then buyer/planner — not the supplier first
0	ASN due, not docked	not_received	Carrier/planner via receiving, still no MIGO
0	Docked / in QC	received_not_posted	QC or receiver: post GR
Partial	Matches partial ASN	partial	Allocate; A03 GR-SPLIT if invoice is full
Multiple GRs	Multiple plants	split_multi_gr	Allocation hint to A03
GR at plant B	PO plant A	wrong_plant	A06 / buyer — do not transfer stock from A05
Qty mismatch explained by UoM	Any	uom	A06 / material master

Wait policy (illustrative Northline A05_WAIT_2026-09): chase not_received only after max(expected delivery + 1 day, invoice date + 3 operating days). received_not_posted wait = 1 operating day.

State machine

observed → classified → (L0 pack only) → (L1) chase_recommended → A09_task → gr_posted_signal → A16 re-dispatch A03.
A05 never enters posted_by_agent.

Charter conformance

- [x] Purpose is one sentence and names a boundary
- [x] Job description names population in / out
- [x] Inputs table has required/optional and “if missing”
- [x] Tools table covers SAP, D365, Oracle, NetSuite, Workday, Other, and read/write
- [x] Responsibilities are verbs at the starting level
- [x] Exclusions include payment release, fraud conclusion, self-promotion
- [x] Human owner is a role with a backup
- [x] Levels 0–4 approval table is present and not softer than the responsibility model

- [x] Escalation has hard triggers and a do-not-escalate line
- [x] Outputs are named artefacts with fields
- [x] Controls include SOD, completeness, change control, untrusted input
- [x] Audit evidence is pullable
- [x] KPIs cover activity / operational / financial / risk and name a source
- [x] Performance history includes the common fields
- [x] Starting autonomy is 0 or 1
- [x] Failure handling has detect / degrade / notify / resume
- [x] Cost monitoring is present
- [x] Northline example is fictional and specific
- [x] No guaranteed savings / fraud / compliance / ROI claim
- [x] Statistics cited or labelled illustrative
