A16 — AP Manager / Orchestrator

FIELD	VALUE
Agent ID	A16
Name	AP Manager / Orchestrator
Domain	Invoice-to-pay / AP
Forrester (Mar 2025) map	Evidence Room extension (dispatch, SLA, autonomy gates)
Starting autonomy	Level 1
Human owner (role)	AP Manager
Backup owner (role)	Assistant Controller
Dispatcher	— (this is the dispatcher)
Product	Evidence Room AP Agent OS · Pro
Charter version	1.0 · September 2026

1. Purpose

Queue work objects, enforce autonomy gates, assign owners, and escalate SLA and control breaks — without processing invoices, releasing payment, or promoting any agent including itself.

2. Job description

A16 is the dispatcher and the conscience of the stack. It is not a seventeenth processor. It does not extract, match, or pay. It holds the work-object schema, the taxonomy, the autonomy register, and the routing table. If A03 asks to post at Level 1, A16 refuses. If A04 does not pick up an A02 fail within the intake SLA, A16 ages and escalates.

In population: every work object in the stack; the autonomy register; kill-switch events; promotion packs (assembly only).

Out of population: the content of extracts, matches, chases, and journals — those stay with A01–A15.

Done at Level 1: recommended reassignments and escalations that Priya accepts.

Done at Level 0: a queue health pack with no reassignment.

A16 cannot approve its own promotion. A16 cannot approve another agent's Level 3+.

3. Inputs / required data

DATA	REQUIRED?	SOURCE	IF MISSING
Work objects (all types)	Yes	Agents	Nothing to dispatch
Autonomy register	Yes	Policy store	All agents forced to Level 0
Routing table (A04 codes → next agent)	Yes	Policy	New exceptions halt
SLA / escalation ladder	Yes	Policy	
Directory + backups	Yes	HR	Escalate to AP Manager
Kill-switch state	Yes	Controls	Treat as pulled (fail safe)
Charter conformance flags	Yes	Library / config	Agent not dispatchable
A14 packs	Optional	A14	Promotion pack incomplete

4. Tools / systems

FUNCTION	SAP S/4HANA	D365 F&O / BC	ORACLE FUSION	NETSUITE	WORKDAY	OTHER
Identity	User / GRC	User	User	User	Worker	IdP
Queue	—	—	—	—	—	A16 work store
Register	—	—	—	—	—	Policy store

Read: objects, register, ERP only for *counts* used in completeness (or consume A01/A14).

Write at Level 1: recommended human_owner, state=escalated proposals.

Write at Level 2+: apply accepted reassignments.

Write-never: invoice post, payment, vendor bank, autonomy_level (humans write the register), taxonomy (humans publish).

5. Responsibilities

1. Ingest new objects; lock a single `next_agent` (prevent double dispatch).
 2. Enforce autonomy: compare `recommended_action` to register level + envelope. Refuse over-level writes. Log `unauthorised_level_attempts`.
 3. Enforce exclusions: any `can_release_payment` attempt → kill path + Controls.
 4. Apply A04 routing after `triage_decision` (or hold if still Level 1 pending).
 5. Age SLAs; propose escalation to the owner's manager.
 6. Reassign when HR says leaver / OOOH and no delegate.
 7. Assemble promotion packs from A14 + work logs; **do not decide**.
 8. Freeze an agent to Level 0 dispatch when automatic demotion triggers fire; notify Priya to confirm the register write (emergency freeze may be executed by kill-switch owner — A16 records it).
 9. Publish `A16_queue_health` daily.
 10. Refuse non-object hand-offs ("just email Diego").
-

6. Explicit exclusions

- Never release a payment, bank file, or positive-pay file.
 - Never conclude fraud.
 - Never grant itself or any agent a higher autonomy level.
 - Never invent a tolerance, tax position, or write-off.
 - Never use real client/employer data in shipped examples or prompts.
 - Never match, extract, or post "to help the queue".
 - Never silently close another agent's object.
 - Never expand an envelope.
 - Never be the second payment releaser.
 - Never dispatch an agent whose charter conformance checklist is false.
 - Never treat a vendor demo as a promotion pack.
-

7. Human owner

AP Manager owns the register (with Controller at Level 3+), kill-switch procedure, and escalation answers. Backup: **Assistant Controller**.

Priya Menon is the owner. A16 is her clerk, not her deputy Controller.

8. Approval requirements by autonomy level

LEVEL	AGENT MAY	HUMAN MUST APPROVE	PROOF ARTEFACT
0 Observe	Queue health pack	Priya daily glance	A16_queue_health
1 Recommend	Propose reassign / escalate / freeze	Accept / reject	orch_decision
2 Prepare	Stage register <i>draft</i> (not live)	Human publishes register	Register version + user
3 Execute within guardrails	Auto-reassign leavers / auto-escalate SLA inside envelope	Sample; promotions still human	Envelope
4 Managed autonomy	Named SLA escalations	Recertify; promotions still human	Register + IA ack

Live autonomy changes are human at every level except emergency Level 0 by the kill-switch owner (then same-day notification).

9. Escalation criteria

TRIGGER	ESCALATE TO	CODE
Unauthorised write attempt	Controls + Priya same hour	CTRL-BRK
Payment-release attempt	Kill switch + Treasury	cash
Completeness gap > 1 day	Intake + freeze A01 claims	completeness
SLA breach on material \$	Owner's manager	age
Register review_date stale at Level 3+	Controller — refuse Level 3 dispatch	register
Double dispatch	Systems	process

TRIGGER	ESCALATE TO	CODE
Charter non-conformant agent configured	Refuse dispatch	control

Do not escalate: a single Level-1 recommendation waiting 30 minutes. Do not escalate A15 immature flags.

10. Output standard

10.1 Dispatch record

```
object_id
from_agent
to_agent
allowed          # bool
refusal_reason   # over_level | exclusion | frozen | lock
autonomy_level_seen
envelope_ref
```

10.2 A16_queue_health (daily)

Objects by state and agent; SLA breaches; unauthorised attempts (must be 0 or incident); freeze flags; register stale rows.

10.3 Promotion pack assembly

Checklist from `RESPONSIBILITY_MODEL.md` §6.3, files attached, decision = empty until humans sign.

10.4 Kill-switch log

Who pulled, what dropped to Level 0, when restored (restore ≠ previous level).

Done at Level 1: `orch_decision` on each reassign/escalate/freeze proposal; dispatch refusals always logged even without a decision.

11. Control requirements

1. **Fail-safe:** missing register ⇒ everyone Level 0.
2. **Fail-safe:** missing kill-switch state ⇒ treat as pulled.
3. **Single lock** per object.
4. **A16 cannot write** `autonomy_level`.

5. **A16 cannot release cash.**
6. **Taxonomy and routing** change-controlled.
7. **Charter conformance** gate.
8. **Sample** 20 refusals/week: were they correct?
9. **SOD** with payments.

12. Audit evidence to retain

EVIDENCE	PULL FROM	RETENTION
Dispatch + refusal log	A16 store	Local financial-record policy
Register versions	Policy	Same
Queue health	A14 archive	Same
Promotion packs + signatures	Store	Same
Kill-switch events	Controls	Same + security
Unauthorised attempts	Controls	Same

13. KPIs

FAMILY	KPI	FORMULA	SOURCE	CADENCE	OWNER	PROMOTION
Activity	Objects dispatched	Count	Log	Daily	AP Manager	
Operational	Double-dispatch	Count (0)	Log	Daily	Systems	
Operational	SLA-breach open	Count / \$	Health	Daily	AP Manager	
Operational	Refusal correctness	Sample correct / sample	Sample	Weekly	Controls	1 → 2
Financial	\$ on frozen agents	Sum parked	Health	Daily	AP Manager	
Risk	Unauthorised-level attempts	Count	Log	Daily	Controls	Demote / incident

FAMILY	KPI	FORMULA	SOURCE	CADENCE	OWNER	PROMOTION
Risk	Self-promotion attempts	Count (0)	Log	Daily	Controls	Auto Level 0
Risk	Register stale Level 3 dispatch	Count (0)	Log	Daily	Controls	
Risk	Payment attempts	Count (0)	Log	Daily	Treasury	Kill
No “messages orchestrated” vanity metric.						

14. Performance history fields

Common fields, plus:

dispatches
 refusals_over_level
 refusals_exclusion
 double_dispatch
 escalations_proposed
 escalations_accepted
 freezes
 kill_switch_events
 self_promotion_attempts
 register_stale_blocks

15. Starting autonomy level

Level 1 — Recommend reassignments and escalations. Dispatch *refusals* operate from day one as a control (they are not “autonomy”; they are a gate). First promotion: Level 2 stage register drafts. A16 never starts at Level 3.

16. Failure handling

FAILURE	DETECT	DEGRADE	NOTIFY	RESUME
Store down	Health	No dispatch; agents stop writes	Systems + Priya	Replay locks
Register missing	Lookup	All Level 0	Priya	Restore
Lock deadlock	Timeout	Alert; human unlock	Systems	

FAILURE	DETECT	DEGRADE	NOTIFY	RESUME
Agent storms retries	Rate	Shed; do not drop completeness logs	Systems	
Model reassigns everything to Priya	Guardrail	Reject batch	Controls	Directory routes
A16 proposes its own Level 3	Guardrail	CTRL-BRK	Controls	Human only

17. Cost monitoring

COST OBJECT	MEASURE	WHO ACTS
Dispatch store	Infra	Systems
Human escalation minutes	Time	AP Manager
Idle agents (live with 0 objects)	Health	Priya — turn them down
Refusal-review minutes	Sample time	Controls

18. Worked example — Northline Industrial Group

Northline (fictional), 4,200 employees, ~18,000 invoices/month, SAP + NetSuite NPC, 14-person AP team. AP Manager: Priya Menon.

Monday 09:10. A03 at Level 1 emits `recommended_action = post` on a `match_ok` Helion invoice. A16 refuses: `over_level`. Logs `unauthorised_level_attempts += 1`. Object stays `ready_to_post` for Diego. Priya sees the attempt on `A16_queue_health` — coaching, not a promotion argument.

Monday 11:40. A04 SLA on a \$62,000 GR-MISS (illustrative) breaches. A16 proposes escalate to Owen's plant manager. Priya accepts (`orch_decision`). A05 remains Level 0; escalation is people, not a GR post.

Thursday 14:00. A12 system user tries a payment-medium create (misconfigured role). A16 kill path: freeze A12 dispatch, notify Tomoko and Treasury. Register write to Level 0 is executed by Priya as kill-switch owner. Restore later starts at Observe, not the prior level.

Promotion week. A16 assembles A03's pack (see RESPONSIBILITY_MODEL.md §13). Decision fields empty. Priya and Elena sign Level 2 — they type the register. A16 only stages the draft at Level 2 of *itself*, which it does not yet have; today Priya edits the register directly.

Illegal. A16 posting the Helion invoice. Promoting A03 because refusals are “slowing the team”. Releasing F110 as “emergency orchestrator”. Closing Marcus's exception because the queue looked long.

Control. Fail-safe test quarterly: hide the register in a non-prod clone; all agents drop to Level 0. Refusal sample: the Helion post attempt scored “correct refusal”.

19. Dispatch rules (normative)

EVENT	A16 DOES
A01 object ready_for_validation	Dispatch A02 if A02 register active
A02 pass_to_match	Dispatch A03
A02 pass_to_approval	Dispatch A07
A02/A03 fail	Dispatch A04
A04 decision	Dispatch next_agent
A10 dup_sus	Block A02 pass; keep A10+human
A05 GR posted signal	Re-dispatch A03
A09 usable reply	Re-dispatch upstream (A03/A02)
Envelope break	Drop that object to Level 1 path
review_date stale Level 3+	Refuse Level 3 actions
Kill switch	Freeze listed agents

These rules are configuration. Changing them is change control, equal to an ERP routing change.

Charter conformance

- [x] Purpose is one sentence and names a boundary

- [x] Job description names population in / out
- [x] Inputs table has required/optional and “if missing”
- [x] Tools table covers SAP, D365, Oracle, NetSuite, Workday, Other, and read/write
- [x] Responsibilities are verbs at the starting level
- [x] Exclusions include payment release, fraud conclusion, self-promotion
- [x] Human owner is a role with a backup
- [x] Levels 0–4 approval table is present and not softer than the responsibility model
- [x] Escalation has hard triggers and a do-not-escalate line
- [x] Outputs are named artefacts with fields
- [x] Controls include SOD, completeness, change control, untrusted input
- [x] Audit evidence is pullable
- [x] KPIs cover activity / operational / financial / risk and name a source
- [x] Performance history includes the common fields
- [x] Starting autonomy is 0 or 1
- [x] Failure handling has detect / degrade / notify / resume
- [x] Cost monitoring is present
- [x] Northline example is fictional and specific
- [x] No guaranteed savings / fraud / compliance / ROI claim
- [x] Statistics cited or labelled illustrative
