TEAM · US\$499

# AP Agent OS Team — playbook

**Evidence Room · Team licence · \$499**

**Version:** 1.0 · September 2026

**Licence:** One organisation, up to eight named seats (draft — confirm before sale)

**Contains:** How a working group uses Professional plus the human system around it

**Does not contain:** Evidence Room in the room. We do not attend unless you bought a Custom Blueprint or a separately scoped session.

**Worked example:** Northline Industrial Group is fictional.

Team is for a working group that has to design, govern, and implement AP agents together. If you are a single practitioner, Professional is enough. Do not buy Team to feel serious. Buy it because other people have to move.

We do not promise savings, fraud detection, compliance, accounting accuracy, autonomous payments, or ROI.

**Responsibility is earned.**

## 1. What you received

Everything in Professional, and then:

| FOLDER             | JOB                                                            |
|--------------------|----------------------------------------------------------------|
| Workshop/          | You facilitate. Timed. Not a keynote.                          |
| Training/          | Four roles: steward, control owner, reviewer, executive reader |
| Implementation/    | Tracker + benefits realisation (hours ≠ cash)                  |
| Change_Management/ | Supervisor-grade notes + executive comms                       |
| Executive/         | Steering templates + twelve-minute CFO brief                   |
| SEATS.md           | Named humans, not a shared inbox                               |

Seats may hold working copies, run the workshop internally, and train non-seat colleagues *from the scripts*. Files stay with seats. No forwarding the zip to a vendor, a Big Four team, or another entity.

## 2. Who should be in the room

Eight seats is a ceiling, not a target. Four is enough.

| SEAT (RECOMMENDED)                                          | WHY                                                                 |
|-------------------------------------------------------------|---------------------------------------------------------------------|
| AP Manager / process owner                                  | Owns A16 and the first fence                                        |
| Exception supervisor or matching lead                       | Floor truth                                                         |
| Control owner (IA or financial controls)                    | Veto                                                                |
| Systems / finance systems                                   | Adapter honesty                                                     |
| Payments or Assistant Controller                            | C01, close adjacency                                                |
| Optional: plant controller, procurement ops, receiving lead | A05/A06 political load                                              |
| Optional: FP&A                                              | F-family later, not week 1                                          |
| Executive reader                                            | May attend only the last 90 minutes of day 1, or the close of day 2 |

Do not fill seats with “interested in AI.” Interest is not a role.

**Northline (illustrative).** Priya Menon (AP Manager), Diego Alvarez (matching), a plant controller, shared-services supervisor, Internal Audit reader. Receiving lead joins the A05 hour only. Treasury joins the A12 hour only. They refuse a vendor in the room for the fence-writing session.

## 3. Operating sequence (you run it)

This is the Team compression of START HERE 01–12.

| WINDOW                 | WORK                                      | PRIMARY FILES            |
|------------------------|-------------------------------------------|--------------------------|
| Week 0 (async, 90 min) | Each seat takes the Diagnostic separately | 01_FREE_AP_AI_READINESS/ |
| Week 1 workshop        |                                           | Workshop/                |

| WINDOW      | WORK                                                          | PRIMARY FILES                 |
|-------------|---------------------------------------------------------------|-------------------------------|
|             | Compare scores. Map live path. Write first brief and fence.   |                               |
| Week 1–2    | Controls, evidence, three measures. Historical-sample design. | Professional packs + Testing/ |
| Week 2–3    | Training modules for people who were not in every hour        | Training/                     |
| Week 3–4    | Executive brief. Go / no-go. Tracker opened.                  | Executive/ + Implementation/  |
| After go    | Limited production fence. Change notes to the floor.          | Change_Management/            |
| After no-go | You still have a designed system. File the stop.              | Decision log                  |

If Diagnostic hard gates trip (payment not human; no live map; unsafe business case), the workshop becomes a **map-and-control** day. You do not select agents.

## 4. Decision rights in the working group

| DECISION              | WHO                                      | NOT                       |
|-----------------------|------------------------------------------|---------------------------|
| Purpose sentence      | Process owner + executive reader         | Vendor                    |
| Fence contents        | Process owner                            | Steering by consensus fog |
| Control design / veto | Control owner                            | Project manager           |
| Kill switch           | Named human                              | A committee               |
| Limited production go | Process owner + control owner            | "The room seemed happy"   |
| Level 2+ later        | Controller (Professional promotion pack) | A16                       |
| Payment release       | Payments / Treasury humans               | Any agent                 |

Agents are never Accountable on a RACI.

## 5. How to facilitate without us

1. Read Workshop/WORKSHOP\_FACILITATION.md twice. Once for timing, once for failure modes.
2. Issue PROCESS\_OWNER\_QUESTIONNAIRE.md and INTERVIEW\_GUIDE.md **three working days** before the workshop. Collect raw notes, not polished decks.
3. Print EXERCISES.md for tables. No slides required. A whiteboard beats a theme.
4. Appoint a **scribe** who is not the facilitator. Artefacts are the product.
5. Appoint a **timekeeper** who is allowed to cut a vendor story.
6. End each block with a written object: map, sentence, fence, RACI row, measure list, stop list.

If the facilitator is also the AP Manager, that is allowed. If the facilitator is “transformation,” they may keep time; they may not own the fence.

---

## 6. What “implemented” means for Team

Not: sixteen agents, a model selected, a savings slide.

Yes:

- Diagnostic compared, disagreements logged
  - One live map the floor recognises
  - One signed purpose sentence
  - One fence and escalation list
  - Three controls with owners and artefacts
  - Three sourced measures
  - Historical-sample plan dated
  - CFO brief delivered
  - Written go / hold / stop
  - Tracker opened with named tasks
  - Floor comms sent if go
-

## 7. Non-promise script (read at open and at the executive hour)

We are not here to promise savings, fraud detection, compliance, accounting accuracy, autonomous payments, or ROI. We are here to design a governed agent layer on the stack we already have. Payment release stays human. Northline in the materials is fictional. Our numbers will be ours.

If a sponsor needs a different script, they need a different product — and we still will not write that script.

---

## 8. When to stop and apply for Custom

Apply only if you can write a paragraph on why this toolkit will be rewritten so heavily you would not use it as shipped. Multi-entity chaos is not automatically Custom. It is often “one entity first.”

Decline is a normal Blueprint outcome. Team was the right buy for most groups.

---

## 9. Support

hello@evidenceroom.ai — product questions. Not “facilitate our Thursday.”

Seat and licence questions: same inbox, with the licence key.

---

## Document control
