

EVIDENCE ROOM

AP Agent Starter Kit

Design one supervised agent end-to-end — Friday purchase, Monday redesign.

Tier 1 — US\$79

Version 1.0.0 · 2026-03-20

AI that earns responsibility.

What you bought

The AP Agent Starter Kit is a practical operating-model pack for designing one governed AP agent on the stack you already own. It is intentionally denser than a prompt pack: charters, taxonomy, controls checklist, KPIs, and an implementation path.

Monday start plan

- Hour 1: read Operating Model Overview and Responsibility Model summary.
- Hour 2–3: run readiness diagnostic; pick one exception-heavy use case.
- Day 2: complete Process Discovery for that slice.
- Day 3: write Agent Charter at Level 0 or 1.
- Day 4: map controls and KPIs.
- Day 5: define shadow-mode test set.

Included artefacts

- AP Agent Operating Model overview
- Top 10 agent blueprints
- Exception taxonomy (starter view)
- Human-vs-agent decision framework
- Process-mapping template
- Agent job description & instruction templates
- KPI scorecard
- Governance checklist
- Transformation roadmap & implementation checklist

Non-negotiables

- Agents earn responsibility — never default to full autonomy.
- Payment authorisation remains human.
- Duplicate/anomaly indicators are not a fraud-detection guarantee.
- Every live agent needs a named human owner.

Price: US\$79. Designed to feel worth significantly more in saved research and workshop time.

Upgrade

Professional (\$199) adds the full 16-agent architecture, control matrix, ROI model, testing/shadow/pilot methodology, and executive packs. Team (\$499) adds workshop, training, and change-management facilitation assets.
