

AP AI Readiness Diagnostic

Score the operation before you buy software or write a prompt

Product	AP Agent OS
Tier	Free
Version	1.0
Date	September 2026
Use	Implementation toolkit

Responsibility is earned.

How to use this diagnostic

Complete it with the AP Manager and one process owner in the same room. Allow 60–90 minutes. Guessing alone in a laptop bag produces a vanity score.

You will produce:

- 1. A readiness score out of 100
- 2. A maturity stage (0–4)
- 3. An opportunity heatmap across ten agent families
- 4. A baseline KPI worksheet
- 5. A business-case starter
- 6. A one-page scorecard you can send to a CFO

What to do

Answer against current evidenced practice, not the roadmap slide.

What can go wrong

A high score on ambition and a low score on data access means you are not ready for execution agents.

Scoring rules

Each question is 0–3.

Score	Meaning
0	Absent or unknown. No reliable data.
1	Informal. Heroics. Tribal knowledge.
2	Defined. Partially evidenced. Uneven across entities.
3	Standard. Measured. Owned. Auditable.

There are 36 questions in six domains (6 × 6 = 36). Maximum 108 raw points, scaled to 100.

Readiness = ROUND(raw / 108 × 100)

Maturity model

Stage	Score	Name	What it means	First move
0	0–19	Unobserved	AP is a queue. Exceptions are folklore.	Baseline KPIs and process walkthroughs
1	20–39	Documented	SOPs exist. Data is patchy. AI is ad hoc.	Exception taxonomy and data access list
2	40–59	Instrumented	Metrics exist. Workflow exists. Agents would have inputs.	Charter one Level 0–1 agent

Stage	Score	Name	What it means	First move
3	60–79	Governed pilot	One or two agents in shadow or controlled recommend mode	Expand only with evidence packs
4	80–100	Earned operating model	Agents are roles with owners, KPIs, controls, promotion gates	Scale the workforce, not the demos

Who should not start agents yet

If Data & systems or Controls scores below 30% of their domain maximum, stay at Observe. Buy this diagnostic's next action (process mapping), not a copilot rollout.

This material is an implementation toolkit. It is not legal, tax, accounting, audit or investment advice. Agents do not authorise payments. Humans remain accountable. Statistics are cited in the Research Ledger.
