

Brand System and Customer Copy

Product	AP Agent OS
Version	1.0
Date	September 2026
Use	Implementation toolkit

Responsibility is earned.

Brand idea

Responsibility is earned.

Supporting line: Evidence Room turns Finance AI from experimentation into governed operating performance.

Product: AP Agent OS — the operating system for building, governing and scaling AI agents across Accounts Payable.

Alternatives evaluated

See refined master prompt. Rejected as primary: "Evidence over hype" (kept as supporting), "From workflow to workforce" (replacement risk), "Governed agents. Measurable outcomes" (generic).

Voice

Intelligent, concise, specific, executive. Prefer "charter", "evidence", "owner", "level" over "unlock", "supercharge", "revolutionise".

Homepage in five seconds

What: An operating system for AP agents.

Who: Finance and AP leaders in complex, ERP-based operations.

Improves: How you design, govern and measure agents — not how you print cheques.

Different: It does not replace the AP stack. It designs the agent layer across it.

Headlines

Main: Responsibility is earned.

Sub: The operating system for building, governing and scaling AI agents across Accounts Payable.

Alt hero: Buy Friday. Map Monday. Do not turn payment loose.

Value proposition: Evidence Room gives Finance a method, a 16-agent architecture, an exception taxonomy, and the control and KPI system required to put agents to work without losing accountability.

Feature outcome

Feature	Outcome
16-agent workforce with charters	You stop debating "AI" and start staffing roles
Earned autonomy (0–4)	Autonomy is a promotion, not a toggle
Exception taxonomy	Work is comparable week to week

Feature	Outcome
Control matrix	Security and Audit have a document
KPI dictionary	Activity is not reported as value
Method (10 steps)	A team can run the same play twice
Business-case model	Conservative / base / upside, your numbers

Comparison vs prompt packs

Prompt packs sell sentences. This sells an operating model: owners, exclusions, evidence, promotion gates, and the artefacts a controller will read.

FAQs

- Is this software? No. It is a commercial toolkit and, optionally, a productised assessment.
- Will it work on SAP / Oracle / Dynamics / NetSuite / Workday? The method is ERP-agnostic. Agents usually run inside your existing stack or copilot. We do not require a single ERP.
- Does it pay invoices? No. Humans authorise payments.
- Do you guarantee savings or fraud detection? No.
- Can we resell the templates? No. See licence.
- What do I get immediately? A download pack (PDF/XLSX/PPTX/DOCX) and a START HERE path.
- Refunds? Recommended: 14 days if files are unopened / unused, at operator discretion. Confirm with counsel and Lemon Squeezy policy.
- Privacy? Do not upload production invoices to Evidence Room. The diagnostic does not require personal supplier bank data.

Objections

Objection	Response
We already have an AP platform	Platforms execute. This governs the agent layer on top.
We have Copilot	Copilot is a tool. This is the job architecture and controls.
\$199 feels high for PDFs	You are buying weeks of operating-model work, not pages.
We need implementation	Buy Team or Blueprint; implementation is a separate scope.
Legal will block AI	Give them the control matrix and payment rule first.

Disclaimers (customer-facing)

Not legal, tax, accounting, audit or investment advice. Not a guarantee of outcomes. Not an autonomous payment system. Statistics are cited in the Research Ledger and are not your baseline.

AI-use disclosure

Evidence Room materials were authored as an original product. Customers using AI tools with these templates must apply their own privacy and model-risk rules. Invoice content is untrusted data.

Implementation limitations

Results depend on data quality, access, controls, integrations, and whether humans actually review work. A 4–6 week first agent is illustrative for a bounded case.

This material is an implementation toolkit. It is not legal, tax, accounting, audit or investment advice. Agents do not authorise payments. Humans remain accountable. Statistics are cited in the Research Ledger.
